

# Craft fining

You decide on the process for clarification and stabilization. **Brewline®** supports you and offers you the right solutions.

## Craft Sol

### Liquid silica sol

**Craft Sol** is a suspension of colloidal silica. It adsorbs proteins for the haze allowing to improve the clarification of the wort, by an addition at the end of boiling, and beer by addition during ageing.

- **Dosage** : 20-120 mL/hL
- **Packaging** : 1 kg and 6 kg bottle

## Craft PVPP

### Micro-granulated polyvinylpolypyrrolidone

**Craft PVPP** stabilizes beer and extends its shelf life by adsorbing a fraction of the polyphenols responsible for the haze. **Craft PVPP** is added to beer in aging or during filtration.

- **Dosage**: 5-50 g/hL
- **Legal maximum dosage**: 50 g/hL
- **Packaging**: 200 g package and 19.96 kg barrel

## Craft I-glass

### Isinglass

**Craft I-Glass** allows very fast clarification, and improve the brilliance and the filterability of the beer. **Craft I-Glass** is added to beer in aging.

- **Dosage**: 1 to 3 g/hL
- **Packaging**: 100 g package
